

Why a Partial Knee?

There are clinically proven health economic benefits for knee arthroplasty, in particular Partial Knee Arthroplasty (PKA) in comparison to total knee arthroplasty (TKA). PKA is a cost effective,¹⁻⁴ proven solution^{5,6} for uni-compartmental osteoarthritis.

POTENTIAL COST SAVINGS VS. TKA

18%↓

On average lower procedural cost savings⁸⁻¹¹

One study found **fewer patients** require rehabilitation and physiotherapy (PKA \$450 vs TKA \$2,455)¹²

Shorter Hospital Stays^{8-12, 14}

*Average length of stay in days annually in one study

According to Kazarian *et al*,
“PKA should be chosen over TKA in order to maximize cost-effectiveness.”⁷

Substantial cost savings of approximately \$3,261 per knee, and \$105 million annually found in one UK study¹

Cost-effective treatment at all ages and the incremental benefit increased with age^{15, 16}

REDUCED RISK OF COMPLICATION vs. TKA

Type of Complication	TKA	PKA
Overall Risk of post-operative complications ¹⁰	11%	4.3%
Risk of transfusion ⁴	11%	0%
90-day rates of readmission ^{10**}	4.2%	2.7%

**Not statistically significant

BENEFITS TO SOCIETY vs. TKA

One study found PKA has an estimated **lifetime societal savings** \$987 million to \$1.5 billion every year.⁶

Total lifetime societal savings for PKA in 2015 are predicted to increase according to Shankar *et al*⁷

Kievit *et al* found PKA patients returned to work within 3 months¹⁸

73% PKA
vs.
48% TKA

PKA had lower total surgical costs according to one study⁴

In the United States (US), the Oxford Partial Knee is intended for use in individuals with osteoarthritis or avascular necrosis limited to the medial compartment of the knee and is intended to be implanted with bone cement; it is not indicated for use in the lateral compartment or for patients with ligament deficiency. Potential risks include, but are not limited to, loosening, dislocation, fracture, wear, and infection, any of which can require additional surgery. For complete prescribing information, see the package insert and www.zimmerbiomet.com.

This material is intended for health care professionals and the Zimmer Biomet sales force. Distribution to any other recipient is prohibited.

Zimmer Biomet does not practice medicine. The treating surgeon is responsible for determining the appropriate treatment, technique(s), and product(s) for each individual patient.
